

Sensitive technology safely packed

bwh Koffer develops secure transport case for high-quality measurement technology for foot pressure analysis

Like many other providers of mobile measurements, our customer also asked himself the question of how to safely pack and transport his sensitive measurement technology. He is a supplier of pressure measuring plates for foot pressure analysis. Freely available cases were out of the question because the plates are very large.

The choice fell on an aluminium case type AZKR. The case could be easily adapted to the dimensions of the product. Inside the case there is a foam inlay, which keeps the pressure measuring plate in place during transport and thus provides optimum protection.

The logo was printed on the outside of the case so that it is clearly visible. Thus the case also serves as an advertising medium.
